

Motion Detectors

Optimised control & energy consumption

The motion detector range is particularly adapted to building external lighting automation. It brings a lot of benefits, such as: comfort, safety and energy saving. Matching with different detection and installation specifications, the detectors are available with a mounting set for wall and ceiling. They can be adjusted with a detection angle from 140° to 360°.

Quick installation

Quick to implement thanks to **quickconnect**  connection.

Adapted solution

Can match with different installation specifications: adjustable mounting compatible with wall and ceiling.

Detection area

Cover a wide detection area :

- detection angle from 140 to 220 / 360 ° (twin detection) ;
- detection up to 16 metres frontal and 12 metres in diameter.

Settings and controls

Easy setup and control of the detector using the optional remote control for:

- time delay
- distance sensitivity
- manual override

The radio operated motion detectors can be freely mounted in any indoor or outdoor location, and can remotely operate a 230V receiver with a 10A output contact. Available in solar or battery operated types, with a transmission range of 100m in open space.

Easy configuration

The sensors utilise the 868.3MHz radio frequency, and can be easily configured using the **tebis.quicklink** , method which is based on KNX.

Flexible installation

Due to mains-free operation, these sensors are particularly usefull in applications where the installation of cables is difficult or not desirable.

Description

These devices are made for automatic control of lighting in both the residential and private/public industry sectors. They automatically switch on lighting when a person's movement is detected and light is needed. The lights turn off after a preset duration.

EE820/821, EE830/831, EE840/841, EE825/826, EE827/828

- That waterproof detector range (IP55) is mainly dedicated to outdoor applications.
- They are equipped with Fresnel lenses that permit to get a high detection performance.
- Detector 140° for access control and perimeter lighting
- 200° models to survey a house facade
- 360° to cover a house corner
- The fixing accessories allow ceiling and corner mounting.
- Settings
The timer and the lux level are set locally, via potentiometer.

EE804/805

- Movement detector for the automatic control of lighting in indoor circulating zones.
Surface mounted (EE804) or flush fitting (EE805).
- Setting
The timer and the lux level are defined via potentiometers
- Mounting of EE805
Connecting system conform to false ceiling installation standards (cable clamp, fixing spring and protection cover)
- Surface mounting of EE804
Connecting on a ceiling box or on mouldings thanks to side pre-cut outs compatible with tehaliit.ateha ATA63000 (6 x 30) or ATA12200 (12x20)
- Output
Potential free relay contact 10A
- Movement detector for the automatic control of lighting in circulating zones.
Surface mounted (EE804) or flush fitting (EE805).

These detectors switch ON when there is a need of light, it turns off the light after a define delay (set via potentiometer)

- Setting
The timer and the lux level are defined via potentiometers
- Mounting of EE805
Connecting system conform to false ceiling installation standards (cable clamp, fixing spring and protection cover).
- Surface mounting of EE804
Connecting on a ceiling box or on mouldings thanks to side pre-cut outs compatible with tehaliit.ateha ATA63000 (6 x 30) or ATA12200 (12x20)
- Output
Potential free relay contact 10A

Complies to IEC 60 669-1 and 60 669-2-1.

Hyper Frequency Motion Detector

Hyper frequency motion detector technology is totally independent from the temperature. Detects through light walls (wood, glass...) Responds to different applications; hot temperature rooms, car parks, dressing rooms, etc.

- surface mounted - 1 channel
- area detection 1-8 mtrs.
- time delay 5 sec - 15 min
- twilight adjustment 2 - 2000 lux
- area detection 1-8 mtrs.
